

How we work

Partners for International
Business Program

This public-private partnership brings together a carefully selected cluster of innovative Dutch cybersecurity companies. The cluster is enthusiastic to contribute solutions for bottlenecks and provide expertise where necessary. In this manner they are capable of adding value to ongoing German projects.

Germany and the Netherlands have long standing diplomatic and economic relations. On a European level we work closely within GDPR compliance, establishing trust in partnerships. On a global level our companies have similar ambitions to expand their reach. The ability to do business with ease and the stability of our cooperation on multiple fronts allows us to think long term in developing cybersecurity strategy together.
